Important Note for Assessors

1. These sample answers and/or assessor's comments are supplied for the use of assessors and moderators only.
2. A copy of this Assessment Sample Answers document and any other assessment evidence must be submitted with the Assessment Booklet when moderation is called for.
3. Sample answers are indicative only and learner's answers may differ from the sample answers provided they meet the requirements of the tasks. The learner's responses should be reasonably comprehensive as judged by the Assessor for level 2
4. While this assessment is open-book, learners are expected to demonstrate independent understanding and answer the questions in their own words.
5. Where necessary and practicable, a learner may give oral responses to the questions in this assessment. If that option is exercised, the verbal answers must be recorded in the assessment booklet at the appropriate place and an attestation signed by the learner and yourself. The attestation certificate can be found at the end of the assessment tasks.
6. Good practice suggests that the verbal answers should be recorded. This can be done using any digital audio editor which can easily be downloaded from the internet.

Level Descriptor

Level Descriptor: The unit standard is at level 2 of the NZQCF. At this level, the following is expected of the learner:

Knowledge
Has knowledge of some facts and information and understands some concepts relevant to a field of work or study

Practice and performance
Performs a range of familiar activities

Critical thinking
Identifies simple problems or goals and recommends a solution or plan

Collaboration
Contributes to group or team activities and acknowledges views and experiences of others

Communication
Communicates basic knowledge and shares ideas on familiar topics

Environment
Highly structured environments

Autonomy and responsibility
Works or studies under some supervision, with some responsibility for own learning and performance

Guidance information

1. Assessment, where applicable, will be conducted in and for the context of real or realistic situations and/or settings, and be relevant to current and/or emerging practice. The assessor may gather evidence over time from a range of scenarios rather than using one assessment where the learner has to demonstrate all of the required skills. For assessment purposes this standard is a practical demonstration of knowledge. Oral or written responses may be used to clarify knowledge.
2. The specified issues will be provided to the learner, and may be in the form of scenarios. The specified issues/scenarios provided will enable learners to demonstrate awareness and knowledge of relevant legal requirements when using digital devices and will provide requirements against which success or otherwise can be evaluated. The specified issues/scenarios must be of sufficient complexity to provide scope for the assessment evidence and to meet the intended purpose.
3. Definitions

   Anti-malware is the generic term used to describe the prevention, detection, and removal of malicious software such as virus, Trojans, spyware and other harmful programs.

   Basic security risks refer to unauthorised access, malware, power failure, natural disaster, data corruption, hardware failure, network access.

   Digital devices refer to an electronic computing device that can receive, store, process or send digital information, such as computers (desktop or laptop), tablets, smartphones or other emerging digital technologies.

   Digital tools may be both hardware (digital devices) and software (applications and programs).

   Malware refers to a type of malicious code that includes viruses, Trojans, worms, backdoor, spyware and other harmful programs.

   Security measures and solutions refer to log-off, shut-down; anti-malware software, firewalls; browser settings, passwords, access control, read only files, physical security/locking; back-up and restore techniques; frequency of saving; UPS or surge protector; personal network protection.

   Security risks in this standard refer to the transparency and accessibility of information and prevention through maintaining basic security requirements to minimise harm, in a home, work or study context.
4. Legislation relevant to this unit standard includes but is not limited to the:
   Copyright Act 1994
   Copyright (New Technologies) Amendment Act 2008
   Crimes Act 1961
   Harmful Digital Communications Act 2015
   Health and Safety at Work Act 2015
   Privacy Act 2020
   Unsolicited Electronic Messages Act 2007
   and any subsequent amendments.
   Current legislation and regulations can be accessed at http://legislation.govt.nz.

1c © Instant Education Solutions Ltd www.instant.org.nz

5. Reference
ACC5637 Guidelines for Using Computers - Preventing and managing discomfort, pain and injury. Accident Compensation Corporation - Department of Labour, 2010, available from Worksafe New Zealand, at http://www.business.govt.nz/worksafe/information-guidance/all-guidance-items/guidelines-for-using-computers

Assessment Task 1: Legal requirements and ethical responsibilities when using digital devices

Outcome 1, PC 1.1, 1.2

What you need to do

health and safety	**information privacy**	**copyright**
software licensing	**guidelines for using computers**	**cyber safety**

The box below lists types of legislation and guidelines relevant to the use of digital devices. Read each of the scenarios that follow and answer the questions for each scenario.

Scenario 1
Sally works for a small engineering firm. She is responsible for client accounts and has access to the company's database that stores all their clients' personal details.

Question 1: Which type of legislation will Sally need to keep in mind with regard to the clients" personal details she has access to? (Choose from the list given at the start of the assessment task.)

Information privacy

Question 2: What are the main points of this type of legislation that Sally needs to be aware of and apply?

- Your description needs to include at least three points, and examples to support your answer.
- Include the name(s) of specific legislation that may apply.

Under the Privacy Act 2020, everyone has the right to privacy of their personal information.

The Privacy Act sets rules for when and why personal information can be collected and shared, and how it should be stored. In her job, Sally needs to make sure she does the following:

- *Takes all reasonable steps to keep clients' personal information secure and prevent unauthorised access (eg not leaving printouts with someone's personal details lying around, making sure she logs off when she is away from her desk, etc)*
- *Updates a clients's details when asked to do so.*
- *When entering data, she needs to take steps to make sure she does so accurately (eg double-checking against source documents).*

INSTANT Education Solutions
1c © Instant Education Solutions Ltd www.instant.org.nz

Question 3: What are Sally's ethical responsibilities regarding her access to clients' personal details?

As well as obeying the law, Sally must realise she is trusted with people's personal data. People have a right to privacy and Sally must not invade that privacy. For example, even if she knows one of the clients outside of work, she cannot look up any information on them, even if she wants to phone them to invite them to dinner.

Scenario 2

Andrew works full-time as an admin assistant in a large company. He spends most of his eight-hour day working on his desktop computer, entering data, typing documents and emails, etc.

Question 1:

a. What guidance does Andrew need to keep in mind when doing his job? (Choose from the list given at the start of the assessment task.)

Guidelines for using computers

b. Name the government agency that provides that guidance.

WorkSafe

Assesor note: The ACC Guidelines for using computers referenced in the unit standard is no longer available. Learner may refer to guidance in WorkSafe's Working with computers section on their website. https://www.worksafe.govt.nz/topic-and-industry/work-related-health/musculoskeletal-disorders/working-with-computers/

Question 2: What are some of the main factors in this guidance that Andrew needs to be aware of and apply when he does his job?

- Your description needs to include at least three points, and examples to support your answer.

Andrew needs to make sure he does the following during his work day:

- Regularly changes his position (eg how he sits at his desk), and takes regular breaks (eg getting up and walking around for a minute or two every hour or so).
- Makes sure that he positions the different hardware (eg keyboard, mouse, monitor, etc) in such a way as to avoid visual discomfort and muscle strain. For example, making sure the monitor is positioned in such a way that light from a window does not shine on or behind the monitor (causing glare), and so that it is about an arm's length away (not too far away, or too close – so that he can comfortably read what is on the screen without straining his eyes).
- Adjusting furniture so that muscle strain and discomfort can be avoided. For example, adjusting the height of his desk and chair so shoulders are rel;axed and elbows can hang from shoulders with horizontal forearms.

Scenario 3
Angela is trying to find some images to use in a project she needs to complete. She has decided to try to find some suitable images online.

Question 1: Which type of legislation will Angela need to keep in mind when sourcing and using images from the internet in her project? (Choose from the list given at the start of the assessment task.)

Copyright

Question 2: What are the main points of this legislation that Angela needs to be aware of?

- Your description needs to include at least three points, and examples to support your answer.
- Include the name(s) of specific legislation that may apply.

*The **Copyright Act 1994** and **Copyright (New Technologies) Amendment Act 2008** set out restrictions that apply to copyright in New Zealand. In New Zealand, any original work is automatically subject to copyright (ie the 'right to copy'). A person (or organisation) who holds the copyright for an item has exclusive rights to copy, publish, distribute, adapt, etc their work. They also have the exclusive right to give up the copyright to their work (eg by releasing it under a Creative Commons licence or into the public domain).*

When Angela looks for images to use from the internet, she needs to take careful note of the copyright licence that applies, and to make sure that she sticks to the licence. For example, if she finds something that is CC BY-SA (Creative Commons Attribution Share-Alike), she must make sure she clearly gives appropriate credit to the person who created the image, a link to the licence, and an indication of any changes she made. She must also keep in mind that she cannot try to make money selling the image herself – she has to share it with others under the same licence.

Question 3: What are Angela's ethical responsibilities when downloading and using images?

She needs to make sure if an image is not public domain it falls under fair use. Whether required or not, she should always acknowledge the sources of images that she uses. The images should also not be offensive.

Scenario 4
Angela wants to download and use some image editing software to help her prepare the images to be used in her project.

Question 1: Which type of legislation will Angela need to keep in mind when downloading and using the image editing software? (Choose from the list given at the start of the assessment task.)

Software licensing

Question 2: What are the main points of this type of legislation that Angela needs to be aware of?

- Your description needs to include at least three points, and examples to support your answer.
- Include the name(s) of specific legislation that may apply.

In the case of software, a user does not buy and own the software itself. They only buy a licence to use the software, and are limited by the requirements of the licence in terms of what they can do with the software.

Software, like any other item created or developed, is subject to copyright. As such, the ***Copyright Act 1994*** *and* ***Copyright (New Technologies) Amendment Act 2008*** *may both apply. You may be breaking copyright law if you copy or use software without a licence, or if you use it in a way not allowed by the licence. For example, Angela needs to check carefully how many devices she is allowed to install the software on (according to the licence), and to make sure she is not downloading and using pirated software. To do this she needs to make sure she downloads the software from a legitimate supplier of the software (eg GIMP should only be download directly from the GIMP website).*

Question 3: What are Angela's ethical responsibilities when downloading and using software?

Downloading and using software without a licence is theft, which is not only illegal, it is un-ethical. Angela should make sure she obtains her software legally, and does not make illegal copies and give it to others.

Scenario 5
Tiger works in a fast-paced work environment, where sometimes things get stressful and he needs to work long hours. As part of his job, Tiger needs to communicate with clients and colleagues using a range of tools such as email, social media apps (eg Facebook, Instagram), etc. Tiger uses a wide range of digital devices to do his job, including printers, tablets, mobile phones, a laptop, and a desktop computer.

Question 1: Which type of legislation will Tiger and his employer need to adhere to in terms of Tiger using these digital devices to do his job? (Choose from the list given at the start of the assessment task.)

Health and safety

Question 2: What are the main points of this legislation that Tiger and his employer need to make sure they adhere to?

- Your description needs to include at least three points, and examples to support your answer.
- Include the name(s) of specific legislation that may apply.

***The Health and Safety at Work Act 2015** sets out the requirements, duties, and rights of employees and organisations related to workplace health and safety. The aim of the Act is to help ensure the health and safety of workers and others (eg customers, clients, visitors, etc) in a workplace. This includes both the physical and mental (psychological) health and safety.*

*Other laws that may also relate to health and safety include the **Harmful Digital Communications Act 2015** and the **Unsolicited Electronic Messages Act 2007**.*

Tiger needs to try his best to ensure health and safety in terms of the:

- *physical environment (eg avoiding making excessive noise, making sure there is enough ventilation for the printer, not leaving cables or equipment lying around which people could trip over)*
- *psychological environment (eg avoiding stress for himself by taking regular breaks and letting his manager know if he becomes overly stressed or tired; avoiding stress for others by not being a cyberbully, being a good digital citizen, and not spamming others).*

INSTANT Education Solutions
1c © Instant Education Solutions Ltd www.instant.org.nz

Scenario 6
Jessie uses her phone a lot for communicating online over social media and messaging apps. She also does a lot of purchasing and online banking using her phone.

Question 1: What legislation does Jessie need to follow when communicating with others online?

Harmful Digital Communications Act 2015. (This Act covers text, emails and social media that is considered harmful to others).

Give three examples of the types of statements a digital communication should NOT contain.

Examples include being threatening or intimidating, making false allegations, making hurtful or harmful comments about someone because of who they are eg their race, colour, gender, sexual orientation or disability.

Question 2: Jessie shares information about herself and her life online. What sort of information should she never share on social media?

Jessie should not share information that others could use to pretend to be her, or to locate her if she does not want them to. She should not share her date of birth, address, phone number or identifying information such as passport or licence number (or send photos of them). Social media sites are not secure and accounts can be hacked.

Assessment Task 2: Security risks

Outcome 2, PC 2.1

What you need to do

There are many basic security risks that may apply when using digital tools.

1. Select at least **five** security risks when using digital tools.
2. For **each** security risk you have chosen, do the following:
   - ☐ **Name** the security risk (eg malware, natural disaster)
   - ☐ **Describe** the security risk in terms of the potential impact it could have on data, or a computing system. Give an example(s) to support your answer. Your example may relate to a home, work, or study environment.

Security Risk 1 (name the risk)**:** Malware

Description of risk:

Malware is malicious software such as a computer virus, Trojan, or worm. Malware can be used to gain unauthorised access, and/or to corrupt or steal data. For example, a phishing scam could be used to get someone to click on a link, and when they click on the link some software is downloaded onto their computer without them knowing. This could be, for example, a Trojan that copies your key strokes (key logger), allowing someone to gain access to your computer and/or personal information (eg credit card details).

Security Risk 2 (name the risk)**:** Hardware failure

Description of risk:

If your computer hardware fails, it could make it impossible to retrieve the data stored on your computer. For example, the hard drive could fail because of worn out parts or because it is damaged. In such a case you may not even be able to start your computer, so this will make it impossible to retrieve the data (without help from a professional – and even then, it may not be possible).

INSTANT Education Solutions
1c © Instant Education Solutions Ltd www.instant.org.nz

Security Risk 3 (name the risk)**:** Power failure

Description of risk:

Power failure could result in any data that has not been saved, being lost.

A power surge can also cause damage to your computer – eg it could damage your CPU, hard drive, or circuits.

Security Risk 4 (name the risk)**:** Unauthorised access

Description of risk:

Unauthorised access is when someone accesses data they do not have permission to access.

Unauthorised people who access data may get access to information that it important, sensitive, and/or private and use this to do harm (eg deliberately corrupt the data, use it against someone), sell the data, or to commit fraud (eg use someone else's credit card number to buy things for themselves).

Security Risk 5 (name the risk)**:** Natural disaster

Description of risk:

Natural disasters are things such as fires, floods, and earthquakes. These can lead to damage to the computer system and/or loss of data. For example, in a flood the computer may suffer water damage (especially to the CPU) and not be able to start; in a fire or earthquake the hard-drive or other important components may be damaged, making it difficult to start the computer and/or retrieve data.

Assessor Note
Learners may identify and describe different security risks than those outlined above. Below are some other possible responses:

Data corruption
Data that is corrupt is unusable for the purpose intended. The data may be wrong or unreadable.

- Corruption can happen whenever we are creating, storing, processing, or accessing data.
- Viruses can cause data corruption.
- Other common causes of data corruption are:
  - hardware fault
  - data entry errors (ie someone makes a mistake when entering data)
  - power failure
  - natural disaster.

Network access
A network connection is two or more PCs or digital devices that connect through a server or connect directly to each other.

Having computers on a network can open up opportunities for the spread of viruses, unauthorised access, and harm to the network and/or individual computers. Once one computer on the network is infected with a virus, it can spread quickly to other computers on the network and cause huge damage.

1c © Instant Education Solutions Ltd www.instant.org.nz

Assessment Task 3: Security measures and solutions

Outcome 2, PC 2.2, 2.3

What you need to do

There are various security measures (procedures) or solutions that can be used for basic security when using digital tools in a home, work, or study context. In this assessment task you must identify and describe these procedures or solutions, and show that you can implement and maintain them.

This task has two parts. You must complete both parts.

Part A: You must identify and describe security measures or solutions that can be used for basic security when using digital tools.

Part B: You must demonstrate their implementation and maintenance.

Part A

1. Select **five** security measures/solutions that could be used for basic security when using digital tools.
2. For **each** security measure/solution, do the following:
   - **Name** the security measure/solution (eg UPS or surge protector; personal network protection)
   - **Describe** the security measure/solution in terms of how it can help to provide basic security when using digital tools (ie how it can help guard against security risks). Give an example(s) to support your answer. Your example may relate to a home, work, or study environment.

Security Procedure/Solution 1 (name the procedure/solution):

Log-off/shut-down

Description of procedure/solution:

Logging off from your computer (or shutting down) means that someone needs to enter credentials (eg username and/or password) before they can use the computer (and access the data on it). You should make sure that whenever you are going to be away from your device, you log off (if you will only be away for a short while), or shut down (if you will be away for a longer period of time – eg overnight). You also need to make sure that a password is required when logging back on to the computer. It can be useful to have an auto log-off set so that the computer automatically logs off if you don't use it for a certain period of time.

Security Procedure/Solution 2 (name the procedure/solution):

Anti-malware software and firewalls

Description of procedure/solution:

Anti-malware software helps protect computers from viruses, malware, and spyware. It scans your device and peripherals (eg USB drive), emails, websites you visit, and information you download from the web, and identifies possible malware threats. Depending on the settings you use, the anti-malware software will then automatically delete any malware threats, or quarantine the malware so that you can decide if it is a genuine threat. It is important not to ignore any warnings or notifications from your malware software. Firewalls work specifically to protect your computer from threats from the Internet by controlling what data is allowed out or in to your computer system.

Security Procedure/Solution 3 (name the procedure/solution):

Browser settings

Description of procedure/solution:

You need to adjust browser settings to do the following:

- *Enable automatic updates for the browser (these include updating security features for the browser)*
- *Block pop-ups, plugins, and phishing sites*
- *NOT to store passwords*
- *Disable third-party cookies*

Doing the above will help prevent malware being downloaded onto your computer, and unauthorised access to your computer system and the data stored on it.

Security Procedure/Solution 4 (name the procedure/solution):

Restricting access

Description of procedure/solution:

Taking steps to restrict access to your computing device, and the data stored on it, is crucial in protecting data and the computer system. This could take the form of physically restricting access (eg locking the room in which your computer is kept), or digitally restricting access by using:

- *passwords (to access the computer, files, different software applications, etc)*

INSTANT Education Solutions
1c © Instant Education Solutions Ltd www.instant.org.nz

- *other access controls (eg using a PIN or fingerprint to restrict access to a device)*
- *read-only files (ie they can only be read; not edited, changed, copied, printed, etc)*

Security Procedure/Solution 5 (name the procedure/solution):

Frequency of data saving

Description of procedure/solution:

Regularly saving your data can help to prevent data loss. Many software applications include auto-save tools. These should be set to automatically save data as regularly as possible/feasible. For example, if you set your app to automatically save every minute, then if the program crashes or there is a power failure, you will only lose a maximum of one minute's work.

Assessor Note
Learners may identify and describe different security procedures and solutions than those outlined above. Below are some other possible responses:

Backup and restore procedures
Regularly saving data to your harddrive is not enough. It is also important to regularly make backups to a separate location. This could be offsite (ie on an external hard drive that is stored in another location than your computer), or to a cloud storage service (eg OneDrive or Dropbox). This means that even if there is a natural disaster and your computer is destroyed or badly damaged, you will still be able to access your data by restoring it from your backup.

UPS or surge protector
A UPS can be used to help prevent problems that could be caused by interrupted power supply (eg loss or corruption of data). A UPS gives your computer a continuous power supply, even if the mains power goes out.

A surge protector helps protect your device against sudden changes in the power supply that could cause your computer to crash, or be damaged.

Personal network protection
A firewall works to protect your computer against threats from the Internet. This includes restricting or preventing the spread of computer viruses and Trojans.

A firewall controls the incoming and outgoing data based on a particular set of rules. It establishes a 'wall' between a trusted, secure internal network – your workplace or schools computer system – and another network that cannot be trusted (ie the Internet).

In addition to a firewall, it is also important that you set a strong password for your network access (eg for your router) and that you change this regularly. You should also update your router's firmware regularly to make sure it is running the most up-to-date protection from malware.

Part B

Your assessor must observe you demonstrating and maintaining security measures/solutions for the use of digital tools. This can be in a home, work or study context.

You must demonstrate at least **five** security measures/solutions. Your assessor will complete the following Assessor Checklist to record their observation.

Assessor Checklist for Unit 32975v1

Use digital tools securely, safely, ethically and legally Level 2 Credits 5

Learner's Name:	**Date:**
Course:	**NZN No.:**

PC	Requirements	✓
2.3	The learner demonstrated and maintained at least 5 security measures or solutions. Note the security measure/solution and comment on what you observed.	
	1. Security Measure: *Backup and restore*	✓
	Assessor's Comments [Comment on what the learner demonstrated and how they maintained the measure/solution]: *Learner backed up a folder and demonstrated restoring a file.*	
	2. Security measure: *Anti-malware software*	✓
	Assessor's Comments [Comment on what the learner demonstrated and how they maintained the measure/solution]: *Learner ran a scan and updated the anti-malware database.*	
	3. Security measure: *Frequency of saving*	✓
	Assessor's Comments [Comment on what the learner demonstrated and how they maintained the measure/solution]: *Learner demonstrated saving every 10 minutes when editing a document. They used the Ctrl+S key to save.*	

Continued on next page...

INSTANT Education Solutions
1c © Instant Education Solutions Ltd www.instant.org.nz

PC	Requirements	✓
2.3	4. Security Measure: *Passwords*	✓
	Assessor's Comments [Comment on what the learner demonstrated and how they maintained the measure/solution]: *Learner demonstrated entering a password to log into their email account. They then demonstrated resetting the password. They covered their hands so I could not see what they typed.*	
	5. Security Measure: *Browser settings*	✓
	Assessor's Comments [Comment on what the learner demonstrated and how they maintained the measure/solution]: *The learner demonstrated blocking popups and disabling third-party cookies in Google Chrome.*	
Assessor's Comments:		

Assessor's Attestation

I have observed/heard the learner identified on this checklist perform the tasks described in this checklist and attest that this is a true and accurate record of the learner's performance.

Assessor's name:	**Date:**
Assessor's signature:	

Assessment Schedule for Unit 32975v1

Use digital tools securely, safely and legally Level 2 Credit 5

Performance Criteria	Evidence Statement (what the assessor looks for)	Judgement Statement (how well or how many)
Outcome 1: Demonstrate knowledge of relevant legal requirements and ethical responsibilities when using digital tools.		
1.1 Legislation and guidelines relevant to using digital devices are identified and described in relation to a given range of specified issues. *Range: include but are not limited to – guidelines for using computers; information privacy; copyright; health and safety; software licensing; cyber safety.*	Assessment Task 1 [See sample answers provided in the Assessment Sample Answers document]	The learner correctly identified and described types of legislation and guidelines including specific examples (e.g. Privacy Act 2020) where relevant, in regards to using digital devices in relation to specified issues. This included at least the following: • Guidelines for using computers • Information privacy • Copyright • Health and safety • Software licensing • Cyber safety
1.2 Ethical responsibilities when using digital tools are identified. *Range includes – information privacy; copyright; software licensing.*	Assessment Task 1 [See sample answers provided in the Assessment Sample Answers document]	Learner correctly identified ethical responsibilities with regards to information privacy, copyright and software licencing.
Outcome 2: Identify risks, procedures and solutions to implement and maintain basic digital safety and security when using digital tools in a home, work or study context.		
2.1 Basic security risks when using digital tools are identified and described in terms of their potential impact on the data or system. *Range: may include but is not limited to – unauthorised access, malware, power failure, natural disaster, data corruption, hardware failure, network access;evidence of at least five basic security risks is required..*	Assessment Task 2 [See sample answers provided in the Assessment Sample Answers document]	The learner correctly identified and described basic security risks when using digital devices and software. This was done in terms of the potential impact these risks could have on data or a computing system. This included at least five of the following: • Unauthorised access • Malware • Power failure • Natural disaster • Data corruption • Hardware failure • Network access

Continued on next page...

Performance Criteria	Evidence Statement (what the assessor looks for)	Judgement Statement (how well or how many)
2.2 Procedures and solutions to implement basic security and maintain basic digital safety in a home, work or study context when using digital tools are identified and described. *Range: security measures and solutions may include but are not limited to – log-off, shut-down; anti-malware software, firewalls; browser settings, passwords, access control, read only files, physical security/locking; back-up and restore techniques; frequency of saving; UPS or surge protector; personal network protection;* *evidence of at least five security measures or solutions is required.*	Assessment Task 3 Part A [See sample answers provided in the Assessment Sample Answers document]	The learner correctly identified and described measures (procedures) and solutions to implement basic security when using digital tools in a home, work, or study context. This includes at least five of the following: • Log-off and/or shut-down • Anti-malware software and firewalls • Browser settings • Restricting access (eg access control, read only files, physical security/locking) • Back-up and restore techniques • Frequency of saving • UPS or surge protector • Personal network protection
2.3 Basic digital safety and security measures and solutions when using digital tools are implemented and maintained in a home, work or study context. *Range security measures and solutions may include but are not limited to – log-off, shut-down; anti-malware software, firewalls; browser settings, passwords, access control, read only files, physical security/locking; back-up and restore techniques; frequency of saving; UPS or surge protector; personal network protection;* *evidence of five security measures or solutions is required.*	Assessment Task 3 Part B [See sample answers provided in the Assessment Sample Answers document]	The learner correctly implemented and maintained at least five security measures and solutions when using digital tools. Measures and solutions may include: • Log-off and/or shut-down • Anti-malware software and firewalls • Browser settings • Restricting access (eg access control, read only files, physical security/locking) • Back-up and restore techniques • Frequency of saving • UPS or surge protector • Personal network protection
